Manufacturer's Declaration

DUNGS®
Combustion Controls

Scope

TSCA Section 6 (h) Compliance

Information about Toxic Substances Control Act Section 6 (h)

Under the Toxic Substances Control Act (TSCA) the US-American EPA (Environmental protection Agency) evaluates possible risks from new and existing chemicals, with the aim to avoid or reduce damaging impact to the environment.

In 2016, the EPA identified **five PBT chemicals** for expedited action that meet the criteria of Section 6 (h) of TSCA, and published a regulatory proposal in 2019.

On January 6, 2021, the EPA issued the final rules. According to these, the following five substances may no longer be sold as substances or as substances in products:

- **Phenol isopropylated Phosphate (PIP (3:1)) CAS-Number: 68937-41-7**
- **Decabromdiphenylether (DecaBDE) CAS-Number: 1163-19-5**
- **2,4,6-Tris(tert-butyl)phenol (2,4,6-TTBP) CAS-Number: 732-26-3**
- **Hexachlorobutadiene (HCBD) CAS-Number: 87-68-3**
- **Pentachlorthiophenol (PCTP) CAS-Number: 133-49-3**

For many years, DUNGS has been standing for quality, safety, and compliance with relevant standards and regulations. To ensure that our products meet current regulatory requirements, we requested documentation from our supply chain.

We hereby confirm that according to our current information none of the 5 PBT-chemicals as per TSCA Section 6 (h) are contained in our electronic components.
