Manufacturer's Declaration

DUNGS®
Combustion Controls

Scope

Regulation (EG) 1907/2006/EG REACH-VO Flame retardant Information about SVHC Substances of Very High Concern

DUNGS has stood for quality, safety and compliance with the relevant standards and regulations for many years.

In the context of the REACH Regulation (EU Regulation No. 1907/2006), we would like to point out that the use of substances which, when considered separately, meet the criteria of Art. 57 REACH Regulation and comply with Art. Article 59 para. 1 of the REACH Regulation are not always avoidable.

This concerns the following product groups:

- Solenoid valves: MV…, ZR…, LGV…, LV…, SV…
- Double Solenoid Valves: DMV …
- Multifunctional gas controls MultiBloc®: MB-B..., MBC…, MBE…, W-MF…, VD…
- Valve proving systems: VPS…
- Shutter: SMRD
- UV-probe: UV4
- Pulling solenoid: ZM…,
- Closed position indicator: VI, CPI

For these product groups, plastic parts with a flame retardant (perfluorobutane sulfonic acids and their salts; mass concentration > 0.1 %) can be used. However, the safe use of the product is of course guaranteed.

Furthermore, there are no indications that the above-mentioned substances would affect the safe use of the product for the intended use.
